**PerceptiMed's scripClip™ Granted Japanese Patent for Will Call System**  
*New Patent for Package Locating System also pending for US, Europe, China and Beyond*

MOUNTAIN VIEW, CA - PerceptiMed announced today the issuance of the Japan patent for the scripClip™ Will-Call System that is sweeping the US retail pharmacy industry. The issued scripClip™ patent (International Application No. PCT/US2013/056691) is for a wireless package tracking and management system that quickly and accurately tracks and locates customer packages in retail pharmacies.

PerceptiMed has nearly 10,000 scripClip™ devices deployed in the US, and this month hit a milestone when it topped 1,000,000 prescriptions sold with the ScripClip™ system. The scripClip™ system helps pharmacy staff quickly and accurately locate the right bag for the right customer, every time. Pharmacies get increased productivity and significant time-savings as prescriptions are quickly retrieved regardless of where they are located — in bins on pharmacy shelves, in prescription hanging bags or in over-sized packages — without alphabetizing.

PerceptiMed also has a number of patent applications pending for its:

- Package Locating System in the US, Europe, Canada, Australia, China, India, Japan, and Brazil
- Inventory Management system in the US, Europe, Canada, Australia, China, India, Japan, and Brazil
- Inventory Assurance system in the US, Europe, Canada, Australia, China, India, Japan, and Brazil
- Point of Sale Verification technologies in the US, Europe, Canada, Australia, China, India, Japan, and Brazil.

Alan Jacobs, PerceptiMed's President and CTO remarked, "We are extremely pleased to see the fruition of years of R&D result in both issued and pending patent applications for our scripClip Will Call System. We see our feature rich will call technology quickly becoming a must-have pharmacy automaton tool."

#####

**About PerceptiMed**

PerceptiMed, Inc. is a leading edge pharmacy and healthcare technology company founded in 2011 by Dr. Alan Jacobs. PerceptiMed products are specifically designed to eliminate human errors in medication dispensing in pharmacies, long-term care facilities and hospitals. PerceptiMed is driven to make the dispensing and administration of prescription drugs safer, reducing injuries and death. Its groundbreaking technology sets the industry standard for medication verification.
